

Plott Labs™ Mobile delivers critical communications, actionable data and situational awareness to improve tactical decision making and responder safety

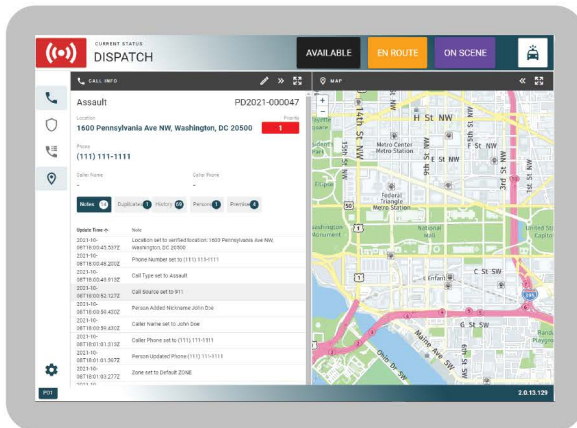

INTERCONNECTED

Supports and improves field operations by connecting personnel to the critical information they need through multiple devices and networks.

Prioritizes and automatically routes query responses, dispatch instructions, turn-by-turn driving directions, incident details, status updates, responder locations and alerts to field and command staff.

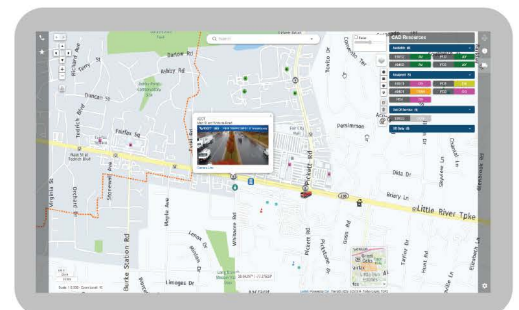

Adaptable screen size, graphic performance with touch screen support automatically.

MODERN MOBILITY

We understand the technology challenges for security and employ Advanced Authentication and FIPs compliancy across our SaaS cloud offerings.

Query results from all data sources are standardized and delivered in an easy-to-read and easy-to-navigate format.

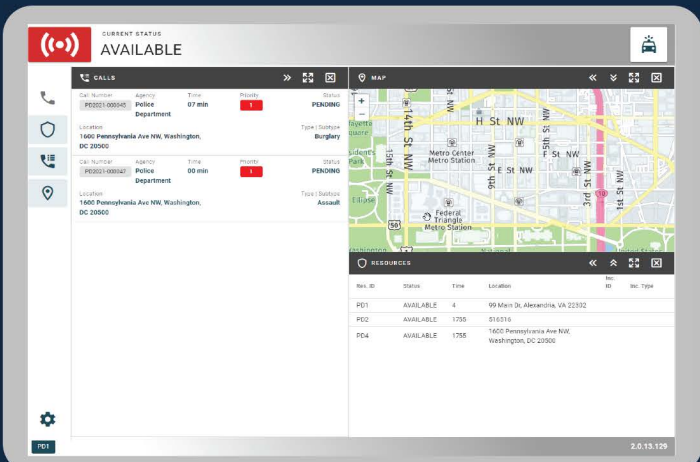

About Us

Plott Labs™ creates interconnected cloud products that support incident response managers and practitioners.

Plott Labs™ TECH SPECS

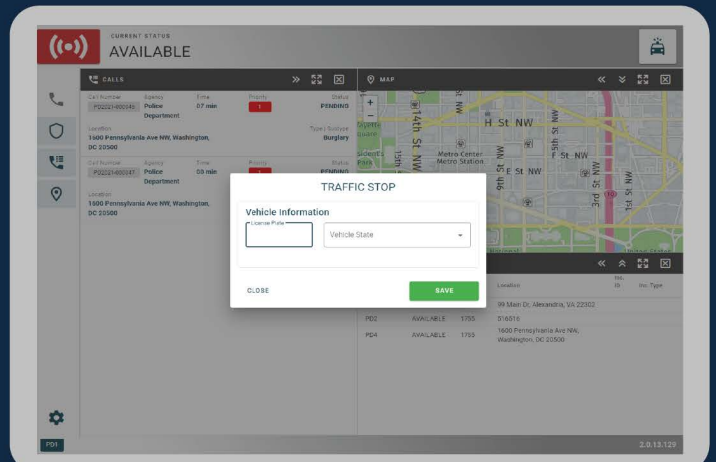

Cloud Technology

We allow agencies to share high availability servers in the cloud, thereby achieving optimum performance, regardless of the number of users or devices while maintaining complete, independent control of their device administration & management.

CJIS Compliant

Our Mobile enables fast and accurate query returns allowing for increased officer and community safety. Our solution incorporates the latest advanced security capabilities and operates in 100% compliance with CJIS Security Policies.

Plott Labs™ BENEFITS

Easy Access

- SaaS solution only requires a browser and network access
- Platinum Plus integration with ProQA
- Standard Internet Connection (No VPN)
- Full CAD call detail

User-Friendly Interface

- Fully configurabable screen layout
- One-button access to commonly used incident handling functions
- Display incident activity visually using an integrated, fully compliant GIS mapping system

Certifications, Compliance & Testing

- NENA i3 Compliant
- Developed using FedRAMP and Risk Management Framework
- Operates with standard ESInet environments including MicroAutomation, AT&T, Intrado, INdigital, Synergem and others
- Compatible within Legacy E-911 environments

Other Offerings in the Plott Labs™ Solutions Suite

- **Plott Labs™ Call Handling** – Proven, software-based call handling application that integrates with existing PSAP infrastructure to provide Next Generation 9-1-1, advanced communications and command & control functions
- **Plott Labs™ Map** – Accurate, integrated mapping system that assists with call routing and delivers location information that is easily shared with dispatchers and first responders
- **Plott Labs™ CAD** – Provides user-friendly features that help Emergency Communication Centers (ECCs) and Public Safety Answering Points (PSAPs) maximize available resources for faster response times
